Fig.8

FIG. 10 is a cross-sectional view of a device 100 in a first state. The device 100 includes a housing 102, a piston 104, and a spring 106. The piston 104 is biased by the spring 106 towards a first position. The housing 102 includes a first chamber 108 and a second chamber 110. The piston 104 is positioned between the first chamber 108 and the second chamber 110. The spring 106 is located in the second chamber 110. The device 100 is shown in a cross-sectional view along a longitudinal axis 112. The housing 102 includes a first end 114 and a second end 116. The piston 104 includes a first end 118 and a second end 120. The spring 106 includes a first end 122 and a second end 124. The first end 122 of the spring 106 is connected to the second end 120 of the piston 104. The second end 124 of the spring 106 is connected to the second end 116 of the housing 102. The first chamber 108 is located between the first end 114 of the housing 102 and the first end 118 of the piston 104. The second chamber 110 is located between the second end 120 of the piston 104 and the second end 116 of the housing 102. The piston 104 is biased by the spring 106 towards the first position. The device 100 is shown in a cross-sectional view along a longitudinal axis 112. The housing 102 includes a first end 114 and a second end 116. The piston 104 includes a first end 118 and a second end 120. The spring 106 includes a first end 122 and a second end 124. The first end 122 of the spring 106 is connected to the second end 120 of the piston 104. The second end 124 of the spring 106 is connected to the second end 116 of the housing 102. The first chamber 108 is located between the first end 114 of the housing 102 and the first end 118 of the piston 104. The second chamber 110 is located between the second end 120 of the piston 104 and the second end 116 of the housing 102. The piston 104 is biased by the spring 106 towards the first position. The device 100 is shown in a cross-sectional view along a longitudinal axis 112.
